Info for Your Doctor

Through rigorous testing, including more than 100 studies, Alpha-Stim® has been proven to treat anxiety and insomnia through cranial electrotherapy stimulation (CES) and acute, chronic and post-traumatic pain via microcurrent electrical therapy (MET).

Alpha-Stim is:

- Cumulative in effectiveness with most patients showing improvement after the first treatment
- Safe, with no serious adverse events reported in over 40 years
- Used as a first-line therapy, or as an adjunct to pharmacotherapy (without polypharmacy side effects)

Alpha-Stim is a FDA-cleared, handheld, prescription medical device that can be used by patients in the comfort of their home, while doing everyday activities such as watching TV, reading, working on a computer, or doing light housework. Earclips are worn for 20 minutes to an hour for mood and sleep, and pain is treated with probes or electrodes.
